

SUMMARY

Fullstack software engineer with **1+ year of experience** building and shipping **Python-powered backend systems, cloud-native applications, and agentic AI workflows** end-to-end. Proficient in **Django, Flask, REST APIs, PostgreSQL, Redis, and AWS/Azure** with hands-on experience designing scalable data pipelines, **multi-step agentic AI systems**, and service-oriented architectures. Comfortable owning features from **whiteboard to production** in fast-paced agile environments; experienced collaborating with cross-functional and client-facing teams. Eager to build enterprise-grade products powered by **AI agents and modern tooling**.

SKILLS

- **Languages & Frameworks:** Python (Django, Flask, DRF), JavaScript, React, SQL, HTML/CSS
- **Backend & APIs:** REST API design, DRF GenericAPIView, service-oriented architecture, async pipelines, Azure Functions, AWS Lambda, SQS, Azure Service Bus
- **Cloud & DevOps:** AWS (Lambda, S3, SQS), Azure (Functions, Blob Storage, Service Bus, DevOps, CI/CD, IAM – exposure), Docker, Linux/Unix
- **Databases & Caching:** PostgreSQL, MySQL, Redis, ETL pipelines, query optimization, indexing
- **AI & Agentic Systems:** Agentic AI workflows (ingest → route → extract → validate → persist), GenAI integrations (Gemini, GPT, Claude APIs), multi-step pipeline orchestration, GitHub Copilot

EXPERIENCE

Cozentus Technologies Pvt. Ltd.
Software Engineer – Python Fullstack & Cloud

Bhubaneswar, India
Oct 2024 – Present

- **End-to-End Feature Ownership:** Designed and shipped fullstack features across the **Xonar logistics platform** (Control Tower, Booking, Routing, Destination Management) – owning requirements, backend API design, DB schema, and cloud deployment on Azure/AWS end-to-end.
- **REST API Development:** Built **Django REST Framework** APIs using a custom **Generic Filter Framework** (DRF GenericAPIView) providing reusable, pluggable query interfaces consumed across **3+ business modules**; extended patterns for create and update operations.
- **Cloud-Native Pipelines:** Engineered Python-based **Azure Function Apps** and **AWS Lambda** (SQS-triggered) workflows for booking processing, e-invoice handling, and customer data ingestion – processing **15K+ records/month** with structured error handling and logging.
- **Performance & Reliability:** Applied **Redis caching** and DB indexing to cut API latency by **40%**; built automated validation modules surfacing health KPIs via **Power BI** dashboards, improving reliability by **95%** across 3+ client teams.
- **Agentic AI Workflow:** Designed and deployed an **agentic document processing pipeline** (MS Graph + MSAL) executing autonomous multi-step actions – **ingest** emails/PDFs → **route** to GPT/Gemini/Claude → **extract** structured fields → **validate** schema → **persist** to PostgreSQL – reducing manual errors by **95%**.
- **Client Collaboration:** Interfaced with clients to gather requirements, demo solutions, and communicate timelines; authored **technical design docs, API specs, and configuration guides** in agile sprint cycles.

PROJECTS

Agentic Document Extraction Platform – Multi-Step AI Pipeline on Azure
Python, Django, React, Gemini, GPT, Claude API, Azure Functions, PostgreSQL, Azure Blob Storage

– Architected a **multi-agent AI system** on Azure with three autonomous Function Apps – each acting as a **specialized agent**: ingesting documents, routing to **Gemini/GPT/Claude** for field extraction, validating schemas, and persisting results – reducing manual errors by **95%**; full CI/CD via Azure DevOps.

Real-Time Anomaly Detection – UPI Transaction Risk Monitor
Python, Flask, Scikit-learn, PostgreSQL, Redis

– Built a **Flask REST API** with ML-based anomaly detection on **500K+ records** and **Redis caching** for real-time lookups – cutting detection latency by **60%**; demonstrates scalable, high-throughput service architecture.

Infrastructure Reliability Pipeline – Food Delivery Analytics
Python, Django, PostgreSQL, Redis, Power BI, Docker

– End-to-end **Django** validation pipeline processing **1M+ records** with anomaly detection and real-time **Power BI** dashboards – deployed via **Docker**, reducing data errors by **95%**.

Automated Excel Product Code Processor
Python, Django, Pandas, REST API

– Built a Django-based web feature to accept Excel uploads, deduplicate and format product codes via **Pandas**, and return downloadable text files – shipped end-to-end as a self-contained fullstack module.
